(4) Investment in Derivative Transactions

The Company uses derivative instruments, including stock/bond-related futures and options, foreign exchange forward contracts and options, and interest rate swaps.

They are primarily used for the following purposes:

- to hedge the fluctuations in market value of its securities investments,
- to hedge foreign currency exposure of its investments,
- to adjust and control the type of interest (fixed or floating) related to its loan and bond portfolio.

The Company recognizes that, although derivatives in general have advantages in their high liquidity and low transaction costs, careful management of derivative transactions is necessary because of the following characteristics that derivative instruments have:

- derivatives have market risks and credit risks, the same as other investments,
- derivatives have unique risks which cannot be seen in real assets, including risks related to leverage.

A. Types of transaction

The derivatives the Company used for the six months ended September 30, 2008 were as follows:

- interest-related: interest rate futures, interest rate swaps,
- currency-related: currency forward contracts, currency options,
- stock-related: stock index futures,
- bond-related: bond futures, bond options, bond forward contracts,
- others: credit default swaps.

B. Transaction policy

The Company's use of derivatives is primarily limited to hedge the market risks associated with its existing asset portfolio. The Company does not engage in speculative transactions.

C. Application of hedge accounting

The Company applied hedge accounting for the following derivative transactions for the six months ended September 30, 2008:

- interest rate swaps transactions used for hedging loans as underlying assets,
- interest rate swaps transactions used for hedging bonds as underlying assets,
- foreign currency forward contracts and currency options used for hedging foreign currency-denominated bonds as underlying assets,
- foreign currency forward contracts and currency options used for hedging foreign currency-denominated term deposits as underlying assets.

In applying hedge accounting, the Company has established investment policy and procedure guidelines in accordance with the "Statement on Establishment of Accounting Standards for Financial Products" issued by the Business Accounting Council. In line with the policy and procedure guidelines, the Company clarifies the risk of underlying assets to be hedged and derivative instruments to be used, and manages derivative transactions by measures including pre- and post-effectiveness test of the transactions.

D. Risk management

The Company strictly manages derivative transactions by establishing position limits, evaluating daily profit and loss along with the underlying assets, and periodical measurement of tracking errors and VaR (value-at-risk).

Credit risk for over-the-counter derivative transactions is also managed by establishing transaction limits for each counter-party. The following table sets forth the credit risk amounts i.e. replacement cost calculated by current exposure method of derivatives held by the Company as of September 30, 2008:

Overall investment risks, including those of derivatives, are managed under the internal risk management policy in which detailed management measures are clarified. "Risk Management Department", the specialist team in risk management, thoroughly watches and controls overall derivative risk profile, while each execution department manages risk at an operations level. Risk Management Department regularly reports to the "ALM Committee".

E. Supplementary information on derivative transactions

Since the Company uses derivatives primarily to hedge the market risks of the existing asset portfolio, information on derivative transactions, including notional amount and gains and losses, is more easily understood by taking into account information on underlying assets that are hedged.

Note:

Figures in [] are option premiums which are included in the balance sheets.
 Forward exchange rates are used for exchange rates as of period ends.
 Regarding assets and liabilities which are denominated in foreign currencies but have fixed settlement in yen under currency forward contracts and are reported in yen amounts in the balance sheets, those currency forward contracts are excluded from the table above.
 Differences between contract value and fair value for forward contracts, and differences between the option premiums paid/received and fair value of the option for option transactions, are shown in 'Gains (losses)'.
 There were no transactions with maturity of more than 1 year in the table above.
